

## SHOE SIZING

To make sure you order the correct size of boot, it is very important to know the exact length of your feet.

Then you can follow these steps: Find a hard solid floor surface which meets a vertical flat wall surface.

Do a foot tracing by putting a piece of paper on the floor with one edge of paper touching the wall. Stand on the piece of paper with upper part of your heel lightly touching the wall. Trace out from the wall around your toes. Hold the pencil perpendicular and as close to your foot as possible so that to be sure to trace the exact length and width. Both feet are required to determine the largest foot. By using a ruler in millimeter, measure from edge of the paper that is touching the wall to the longest toe on both feet. Then by using the sizing chart below you can find the Boen size that comes closest to the measurement you got. The length in millimeter correspond to the maximum foot length right to that particular size. For example, if your feet measure 260mm and want a tight fitting boot the perfect size would be 41. If you prefer a looser fit you can choose the size 42.
